Installing Git on MacOS

Please note: You will need administrator's rights to install the Git software. If you do not have Administrator's right, please contact your computer support team.

1. Git may already be installed on your machine. Open terminal and run and type:

   git --version

   If Git is installed, you will see a reply such as:

   git version 2.20.1 (Apple Git-117)

2. If Git is not installed, you can install it via Homebrew if you have Homebrew installed. Open terminal and type:

   brew install git

   Once the installation is complete, you can verify that the install was successful by trying the command in step 1 above.

3. Install it from https://git-scm.com/download/mac   Once installed try the command in step 1 above.
